REFERENCES

Available on request

Brittany Olivia Cahill-Carnaby

Software Developer

Software developer who came into tech sideways and has stuck with it. Comfortable moving between backend development, DevOps and QA. Most recently focused on testing and bug-fixing to keep a live product stable for clients, and before that building out infrastructure and security from the ground up. Enjoys picking up new tools quickly and writing code worth remembering.

WORK EXPERIENCE

Software Developer (Contractor)

PolicyCheck Limited · July 2026 – Present

- Focused primarily on testing and bug-fixing across the PolicyCheck web application, working through reported issues and verifying fixes ahead of releases
- Partnered with the wider dev team to reproduce, triage and resolve defects, helping keep a live product stable for insurance-industry clients
- Continued working within the agile workflow (standups, showcases and async collaboration) established during the earlier internship

Software Developer Intern

PolicyCheck Limited · 21 Jul 2025 – 29 Sep 2025

- Containerized the entire PolicyCheck web application with Docker, cutting new developer setup time from 2 weeks to 20 minutes
- Added multi-factor authentication to strengthen account security and reduce exposure to potential attacks
- Integrated third-party APIs (Gmail, Microsoft) and took part in agile ceremonies, standups and showcases
- Collaborated with developers via Slack and other communication tools

Software Developer

Consumer NZ · 10-week placement, 2026

- Built scoring software in R independently and remotely, syncing with the project team through weekly meetings
- Authored a tool usage guide and explained technical work clearly to non-technical stakeholders

EARLIER EXPERIENCE

Security & Animal Control Officer, HSM

Mar – Aug 2020

Security patrols, animal control callouts and on-call response.

Retail Assistant, Napier Animates

1 year

Customer service, stock management and day-to-day store operations.

PERSONAL PROJECTS

Fredrick: CLI desktop assistant that sits in the system tray and is summoned via a hotkey; opens apps, manages browser tabs, and starts Discord calls.

3D game: built in Godot with Blender-modelled assets.
